

Listing of Claims:

Claims 1 through 39 (canceled)

Claim 40. (new):: A partition system, comprising:

a framework including opposing vertical sides and a framework interior disposed between said opposing vertical sides; and

at least one tile mounted to said framework, said tile including a storage area disposed within said framework interior; and

a portable storage component attached to said tile, at least a portion of said portable storage component received within said storage area.

Claim 41. (new): The partition system of Claim 40, wherein said framework includes a pair of upper and lower spaced horizontal track members defining vertically opposed tile mounting spaces, said at least one tile including an upper edge received within said tile mounting space of said upper track member and a lower edge received within said tile mounting space of said lower track member.\

Claim 42. (new): The partition system of Claim 40, wherein said portable storage component includes a storage compartment, said storage compartment vertically oriented when said portable storage component is attached to said tile.

Claim 43. (new): The partition system of Claim 42, including a plurality of said portable storage components attached to said tile with at least a portion of each said portable storage component received within said storage area, said portable storage components disposed vertically adjacent one another.

Claim 44. (new): The partition system of Claim 40, wherein said tile includes a storage bin movable between a first position in which said storage bin is disposed within said storage area and a second position in which at least a portion of said storage bin is disposed outwardly of said storage area, said portable storage component receivable within said storage bin.

Claim 45. (new): The partition system of Claim 40, wherein said tile includes first mounting structure and said portable storage component includes second mounting structure, said second mounting structure engageable with said first mounting structure to attach said portable storage component to said tile.

Claim 46. (new): The partition system of Claim 45, wherein said first mounting structure comprises at least one slot in said tile, and said second mounting structure comprises at least one hook on said portable storage compartment.

Claim 47. (new): The partition system of Claim 40, wherein said portable storage component has a width of between 305 and 315 millimeters, whereby said portable storage compartment is dimensioned for receipt within a drawer of a filing cabinet.

Claim 48. (new): The partition system of Claim 40, wherein said portable storage component is substantially entirely received within said storage area of said tile.

Claim 49. (new): A partition system, comprising:

a panel having a side face including a horizontally disposed track member, said track member including a horizontally elongated channel; and

a portable storage component attached to said track member, said portable storage component including attachment structure received within said channel.

Claim 50. (new): The partition system of Claim 49, wherein said panel further includes a first tile having a lower edge received by said track member, and a second tile having an upper edge received by said track member.

Claim 51. (new): The partition system of Claim 49, wherein said channel is C-shaped in cross section and opens outwardly from said side face of said panel.

Claim 52. (new): The partition system of Claim 49, wherein said portable storage component extends outwardly of said side face of said panel when attached to said track

member.

Claim 53. (new): The partition system of Claim 49, wherein said portable storage component includes a storage compartment, said storage compartment vertically oriented when said portable storage component is attached to said track member.

Claim 54. (new): The partition system of Claim 53, including a plurality of said portable storage components attached to said track member, said portable storage components disposed vertically adjacent one another.

Claim 55. (new): The partition system of Claim 49, wherein said portable storage component has a width of between 305 and 315 millimeters, whereby said portable storage compartment is dimensioned for receipt within a drawer of a filing cabinet.

Claim 56. (new): A partition system, comprising:

a framework including opposing vertical sides and a framework interior disposed between said opposing vertical sides;

at least one tile mounted to said framework, said tile including a storage area disposed within said framework interior;

a storage bin mounted to said tile and movable between a first position in which said storage bin is disposed within said storage area and a second position in which at least a portion of said storage bin is disposed outwardly of said storage area; and

a portable storage component receivable within said storage bin.

Claim 57. (new): The partition system of Claim 56, wherein said framework includes a pair of upper and lower spaced horizontal track members defining vertically opposed tile mounting spaces, said at least one tile including an upper edge received within said tile mounting space of said upper track member and a lower edge received within said tile mounting space of said lower track member.

Claim 58. (new): The partition system of Claim 56, wherein said portable storage component includes a storage compartment, said storage compartment vertically oriented when

said portable storage component is received within said storage bin.

Claim 59. (new): The partition system of Claim 56, wherein said portable storage component has a width of between 305 and 315 millimeters, whereby said portable storage compartment is dimensioned for receipt within a drawer of a filing cabinet.

Respectfully submitted,
